DETAILED ACTION

Receipt is acknowledged of papers submitted by the International Bureau under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Optical Society of America, Volume 15, No 3, Properties of photonic crystal fiber and the effective index model to Knight et al.

Knight et al discloses a single photonic crystal fiber comprising a glass or plastic core with a geometric radius, a glass or plastic cladding surrounding the core including a plurality of air holes that extend in the longitudinal direction, where the normalized frequency "V" is less than 2.405 for a conventional fiber and less than 2.5 for a effective index model. Both 2.405 and 2.5 are between the claimed "V" range of 2.4 and 3.3.

But Knight et al fails to specifically disclose the air holes center-to-center spacing to be 1.5 times or greater than the wavelength of the propagation of light. However, Applicant discloses in the Specification, the purpose of the specific relation between the air holes and the wavelength of the propagation of light is to increase the normalized frequency "V" to a range between 2.4 and 3.3. Since Knight et al discloses values of the normalized frequency to be between the claimed range, it would have been obvious at the time the invention was made to a

person having ordinary skill in the art to have the relationship between the spacing of the holes an the wavelength of the propagation of light to be 1.5 times or greater since Knight et al discloses and achieves a value in the range Applicant claims.

Prior Art

The documents submitted by applicant in the Information Disclosure Statement have been considered and made of record. Note attached copy of form PTO-1449.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References A-C all discuss photonic crystal fibers with patterned air holes.

Reference A further discusses the normalization frequency formula discussed by Applicant.

Inventorship

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tina M. Wong whose telephone number is (571) 272-2352. The examiner can normally be reached on Monday-Friday 8:30-5:30.

Application/Control Number: 10/537,845

Art Unit: 2874

Swerm ore

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rodney Bovernick can be reached on (571) 272-2344. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
